

Use Case

Name - Create a group

Identifier - UC 2

Description - The user submits a request to create a new group.

Preconditions - The user should be registered.

Postconditions - The request will either be accepted or rejected.

Basic Course of Action -

1. The use case begins when a user wants to create a new group.
2. The user submits a new group request to the admin.
3. The user will specify the details about that particular group in a form.
4. The admin will verify the request details, and take the appropriate action.
5. The user who sent the request gets notified about whether their request has been accepted or not.
6. If the request is accepted, then the user is elevated to the position of group admin.
7. If the request is not accepted, then the group does not appear on the webpage.
8. If there are any changes, the group admin can modify the same on the portal.

9. The use case ends here.

Alternate Course A - A similar group already exists

A.1. The admin will reject the request submitted by the user.

A.2. The user gets notified.

A.3. The use case ends here.

Alternate Course B - The group admin decides to modify group details

B.1. The group admin can update the group details.

B.2. These changes get reflected on the webpage.

B.3. The use case ends here.

Alternate Course C - The group admin decides to delete the group

C.1. The group admin can delete the group.

C.2. All members of the group are removed, the the group is deleted from the portal.

C.3. The use case ends here.
