CL 8 - Assignment 1

Problem Statement for NEWBIEE:

A system to connect users with similar interests

Batch: P-11

**Members:**
Amod Dhopavkar - 43304
Arpit Batra - 43306
Piyusha Bhujade - 43312
Vivek Darak - 43317

The software to be designed will allow effective communication between the freshers and other students with similar interests. With the advent of the latest technology, our software can be used as a bridge between seniors and juniors so that they can connect with each other with minimal efforts. It would also allow the students of different colleges with similar interests to connect with each other. This will prove helpful to the new students as they can get in touch with the seniors as well as with other students, so as to solve their queries or for their personal growth.

The users can sign up for the system, which will give them access to the various features. The users will be able to join various groups for skill development, and take part in different events. They will also be able to post their queries on the forum, wherein someone would be able to help them out. They will also be able to create their own groups, which they think could be useful for all.

Regular users would also have the facility to create new groups. These groups would have to be approved by the admin. Other users can be a member of these groups, only when they have been approved by the admin. The admin can view all the users, as well as the various groups and events created.
