# Use Case

Event management under group**.**

Name: Event Management

Identifier: UC 3

Description:

Participating in events which comes under group where students are interested in.

Preconditions:

The Student must join the group for the event where they will be given registration form for the event.

Postconditions:

The Student will be able to participate in that event they are interested in.

Basic Course of Action:

1. The use case begins when an event admin wants to conduct an event under the group.

2. The event admin requests group admin for an event to be conducted.

3.   In that request, the event admin will specifically give the details about that event to the group admin.

4.   The group admin will verify the details given by the event admin and check if it is an appropriate event to be conducted.

5.   After the group admin's verification, the notification will be sent to the event admin as if their request is accepted or rejected.

6.   If the request is accepted by the group admin then the event will appear on the web page with few details or it is rejected, then the event will not appear on the webpage.

7.   After accepting the request, the event appeared on webpage and the end users are free to participate in the event.

8.   The event admin will put a registration form to participate in that event.

9.   The end users who wants to participate they can fill the form and participate in that event.

10. After filling the form, they will get all the detailed information of the event

11. Before the participate in the event, the end users will be shown only the timing, place, and number of members in that event.

12. If there are changes in the event, then end users will get notify.

Alternate Course A: The Event is Not Appropriate for Group Admin.

     A.1. The Group Admin will reject the request given by the Event Admin.

     A.2.The Event Admin will get notified about the request.

     A.3.The use case ends.

Alternate Course B: The End Users Decides Not to Participate in Event.

     B.1. The student views the list of Events in the Group as the group will have other events too.

     B.2. The use case ends.

Alternate Course C: The End Users who participates in an event.

     C.1. The End Users will get detailed information about the event.

     C.2. The End users who do not participate they will get few details about the event.
